

Discovered Facts Summary

Gathering District-Wide Benchmarks

Following is a list of the facts you've discovered while **gathering district-wide benchmarks**. Those highlighted in **green** are considered critical findings and should provide maximum assistance in focusing your change efforts. Those highlighted in **yellow** are considered significant findings as well. Non-highlighted facts are supportive.

16	Much Counselor Data is Not Formally Captured
	Privacy restrictions limit the types of data counselors are able to retain and make available to others. However, your analysis suggests that perhaps counselors are overly cautious and retaining information that may be helpful in disaggregation and analysis of specific performance enhancement measures. You fear that this may contribute to the overall lack of data utilization at Windsor and may be preventing the school from identifying creative solutions to the sagging student performance indices.
17	Windsor's Evidence-Based SEL Component is Weak
	<p>You discover that very little social emotional learning (SEL) is integrated into the standard curriculum and that most of the faculty are comfortable with this exclusion. You suspect that many concepts introduced and expanded upon in SEL training could assist students in working together in more productive ways and assisting in the transition of tier 2 and 3 students. Two major findings that stand out relative to SEL training are:</p> <ul style="list-style-type: none"> 1 - Compared to control students, students participating in SEL programs showed significantly more positive outcomes with respect to enhanced SEL skills, attitudes, positive social behavior, and academic performance, and 2 - Significantly lower levels of conduct problems and emotional distress exist in students participating in these programs.
20	Absentee and Disciplinary Data
	Your perusal of this data suggests that absenteeism and disciplinary actions as a percent of student population at Windsor are on par with other schools in the district. Although these indices have increased over the past five years that same approximate increase appears to be common in all schools across the district. Perhaps associated with an influx of low paying jobs in the community, district metrics in these two area are above the state averages over the same period of time.
